Sir:

Prior to examination on the merits, please amend the above-identified application as set forth below.

**IN THE CLAIMS:** Please amend claims 1 and 6 as follows:

b/1

1. (Twice Amended) A hydrodynamic type oil-impregnated sintered bearing, comprising: a porous bearing body of sintered metal having a bearing surface opposed to a sliding surface of a rotating shaft to be supported via a bearing clearance, and hydrodynamic pressure generating grooves slanting against an axial direction provided in the bearing surface; and lubricating oil or lubricating grease impregnated in pores inside the bearing body, wherein

said lubricating oil or a base oil of said lubricating grease is a lubricating oil selected from among mixtures of poly-a-olefin or hydrogenated compound thereof and ester wherein, a plurality of bearing surfaces are formed on an inner periphery of said bearing body and separated from one another by an endless circumferential groove,
